EDUCATION

Bachelor of Science in Mechanical Engineering | University of Cincinnati, Cincinnati, OH **Expected: December 2026**
Minor in Engineering Project Management | GPA: 3.68 / 4.00 | University Honors Program (Top 7% of class) | Tau Beta Pi
Relevant Coursework: Kinematics & Machine Design, Mechanics of Materials, Manufacturing Processes, Automotive Structural Design, Engineering Project Management, Thermodynamics & Heat Transfer, Statistical Quality Control

TECHNICAL SKILLS

Product & Process Development: Product Development, Process Development, Prototype Tooling & Builds, DFMEA, DVP&R, OEM Launch Activities, Customer Specific Requirements (CSR)

CAD, Drafting & Design Specifications: SolidWorks (3D Complex Assemblies & Surfacing), Creo, AutoCAD (Design Specifications, Drafting), ASME Y14.5 GD&T, FEA Stress Simulation, Experimental Construction

Program Management & Project Controls: Program Management, Goals Timing & Cost Execution, Open Issue Lists (OIL), Timelines, Engineering Change Notices (ECNs), Cross-Functional OEM Coordination

Validation, Testing & Analytical Techniques: Automated Test Cells, Design/Product Validation (DVP), Dynamic Pressure & Strain Transducers, 8D Problem Solving, 5-Why, MS Project, Microsoft Word & Excel

PROFESSIONAL EXPERIENCE

Operations Engineering Intern | Ischebeck Titan LLC — Dubai, UAE **May 2024 – August 2024**

- Modeled complex product components, prototype tooling, and assembly staging fixtures in SolidWorks and AutoCAD with ASME Y14.5 GD&T design specifications.
- Supported program management for a \$1.8M plant expansion, coordinating drafting schedules, material procurement, and experimental build construction.
- Resolved complex design problems on structural assemblies, applying FEA and mechanical principles to cut fabrication cycle times by 30% with zero rework.
- Standardized manufacturing process instructions, technical specifications, and bills of materials (BOM), aligning product designs with customer requirements.

Project Engineering Co-Op | Nucor Corporation - Raw Materials — Cincinnati, OH **August 2025 – December 2025**

- Managed product and process development deliverables for \$750k–\$1M capital programs, establishing project timing, budgets, and Open Issue Lists (OIL).
- Spearheaded 8D and 5-Why root cause engineering failure investigations, redesigning mechanical linkages and saving \$85,000/year in lost operational downtime.
- Formulated design specifications and incoming quality criteria for machined drive components, performing GD&T verification to ensure 100% drawing conformance.
- Audited mechanical drawings and P&IDs during systematic field walkdowns, resolving interface interferences between engineering models and plant assemblies.

Test Engineer Co-Op | Cummins Inc. — Jamestown, NY **August 2023 – December 2023**

- Executed Design Verification Plan (DVP) durability testing and product validation across 30+ durability test cycles on automated powertrain test cells.
- Instrumented automated prototype test cells with dynamic strain gages, pressure transducers, and thermocouples, capturing high-frequency operational datasets.
- Analyzed validation datasets in NI DIAdem, authoring 15+ comprehensive engineering reports detailing failure modes and design recommendations for chief engineers.
- Troubleshooted test cell electrical schematics and sensor wiring harnesses, validating circuit continuity, terminal crimping integrity, and transducer calibration.

Project Engineering Co-Op | Nucor Corporation - Raw Materials — Cincinnati, OH **January 2025 – May 2025**

- Engineered a remote-operated electro-mechanical safety actuation product concept, eliminating a severe plant hazard and achieving 100% operator safety compliance.
- Validated mechanical interfaces, foundation grouting, and coupling tolerances for a 5,000 HP industrial driveline integration under strict Lockout/Tagout (LOTO) protocols.
- Commissioned and calibrated processing equipment across 9 facilities in 6 states, executing hydrostatic pressure tests and dynamic tolerance verification.
- Modeled heavy-duty welded steel protective enclosures in SolidWorks and Creo, conducting FEA stress simulations and detailing complete manufacturing BOMs.

Maintenance Engineering Intern | Nucor Corporation - Nu-Iron — Trinidad & Tobago **July 2026 – August 2026**

- Diagnosed mechanical failure modes across 5+ critical rotating equipment assemblies (pumps, bearings, conveyors), designing PLC interlocks that prevented catastrophic failure.
- Overhauled industrial hydraulic circuits by selecting directional control valves and re-routing piping, reducing mechanical shock loading by 30% to extend component life.
- Calculated hydraulic head-loss and flow rates via Goulds pump system evaluations, optimizing machinery cooling-water flow to stabilize thermal operating parameters.

Lead Operations Assistant | University of Cincinnati — Cincinnati, OH **August 2024 – Present**

- Direct facilities maintenance operations and MEP building system inspections across 14 multi-story residential complexes totaling 4.3M sq. ft., leading a 13-person crew.
- Architected a preventative maintenance dispatch matrix in Microsoft Excel across 12 facilities, streamlining trade contractor work orders and accelerating turnaround by 18%.
- Audit mechanical documentation, contractor punchlists, and final job closeouts during facility renovations, enforcing safety practices and design compliance.
